To print pages (not more than 5% for one session)

To copy a text (not more than 3% for one session)

To choose a suitable mode to view a text

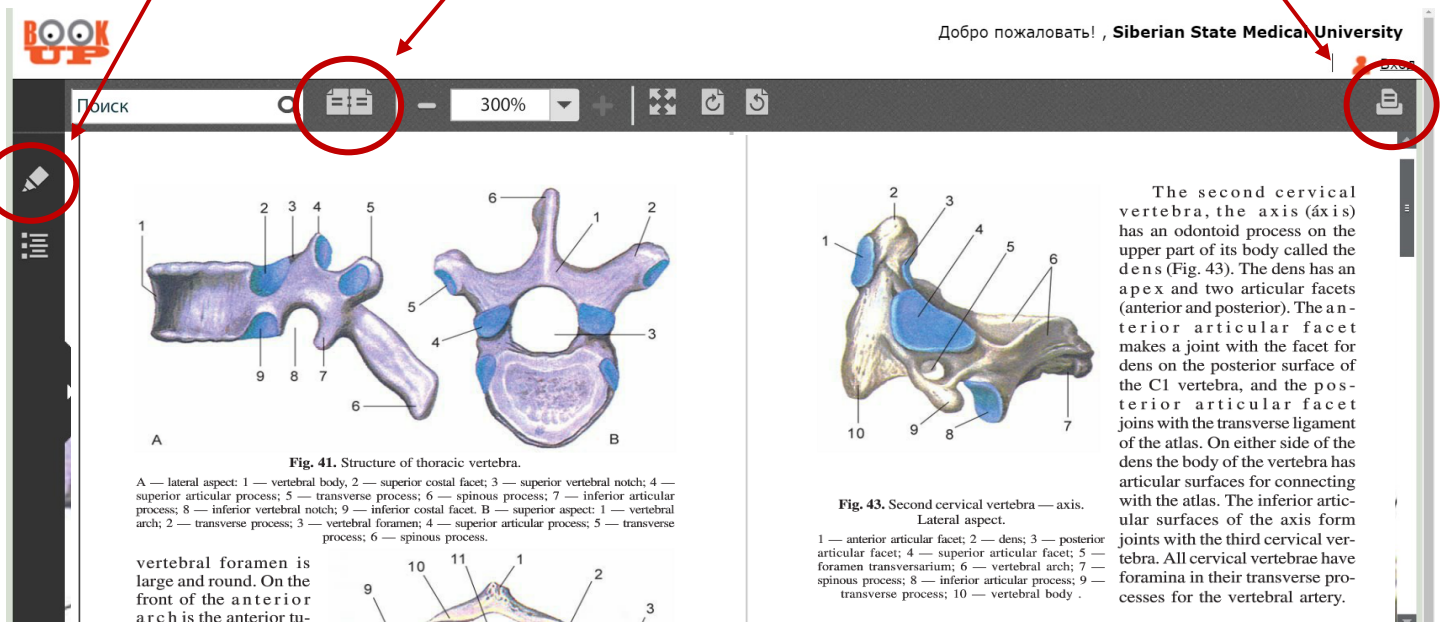

Fig. 41. Structure of thoracic vertebra.

A — lateral aspect: 1 — vertebral body, 2 — superior costal facet; 3 — superior vertebral notch; 4 — superior articular process; 5 — transverse process; 6 — spinous process; 7 — inferior articular process; 8 — inferior vertebral notch; 9 — inferior costal facet. B — superior aspect: 1 — vertebral arch; 2 — transverse process; 3 — vertebral foramen; 4 — superior articular process; 5 — transverse process; 6 — spinous process.

vertebral foramen is large and round. On the front of the anterior arch is the anterior tu-

Fig. 43. Second cervical vertebra — axis. Lateral aspect.

1 — anterior articular facet; 2 — dens; 3 — posterior articular facet; 4 — superior articular facet; 5 — foramen transversarium; 6 — vertebral arch; 7 — spinous process; 8 — inferior articular process; 9 — transverse process; 10 — vertebral body .

The second cervical vertebra, the axis (áxis) has an odontoid process on the upper part of its body called the dens (Fig. 43). The dens has an apex and two articular facets (anterior and posterior). The anterior articular facet makes a joint with the facet for dens on the posterior surface of the C1 vertebra, and the posterior articular facet joins with the transverse ligament of the atlas. On either side of the dens the body of the vertebra has articular surfaces for connecting with the atlas. The inferior articular surfaces of the axis form joints with the third cervical vertebra. All cervical vertebrae have foramina in their transverse processes for the vertebral artery.
